

Trauma Protocols Manual: Rules of the road for Housestaff contains clinical management algorithms developed by members of the departments of surgery, anesthesiology, orthopedics, and neurosurgery at San Francisco General Hospital. It is designed for use principally by surgical residents in order to establish a consistent approach to patient management. Each chapter includes easy-to-use guidelines for the consistent care of severely injured patients where every second counts. The key components of every chapter are: the clinical management algorithm; a brief explanation of the algorithm and its key points; a more in-depth selected readings type of condensed review of the current literature that has led to the management algorithm; a commentary written as areas of institutional variance where good prospective randomized data is lacking. A must for housestaff!
